

CHAVIDISETTY NAGA SAI TEJASWI KUMAR

Data Analyst · SQL & Python · Power BI & Tableau · Fraud & Operations Analytics

Hyderabad, India | +91 8897334187 | chavidisettyteja@gmail.com | linkedin.com/in/chavidisettyteja

SUMMARY

Analyst with 2+ years of experience turning messy, high-volume operational data into clear decisions. Built KPI dashboards and reporting pipelines for fraud and AML operations at Wipro (Google Client) — covering SLA tracking, error trend analysis, and risk anomaly detection across GCP, YouTube, and Workspace. Strong command of SQL, Python (Pandas, NumPy), Power BI, Tableau, and Snowflake. Delivered a 14% accuracy improvement and 22% error reduction through data-driven process analysis and root cause investigation. Promoted three times in 14 months. Looking for a data analyst role where analysis directly shapes outcomes.

TECHNICAL SKILLS

Languages & Querying: SQL (Joins, Window Functions, CTEs, Aggregations, Indexing), Python (Pandas, NumPy, Matplotlib, Seaborn), Java (Core OOP)

BI & Visualization: Power BI (DAX, Star Schema, Data Modeling), Tableau, Excel (Advanced — Pivot Tables, VBA-style automation, trend analysis)

Databases & Warehousing: PostgreSQL, MySQL, Snowflake (staging schemas, query optimization)

Analytics Techniques: EDA, Data Cleaning & Transformation, KPI Reporting, Anomaly Detection, Root Cause Analysis, ETL Processes, Cohort Analysis

Domain Knowledge: Fraud & AML Operations, KYC/CDD Compliance, Risk & Control Frameworks, SLA Management, Operational Metrics

Practices: Agile, Cross-functional Collaboration, SOP Development, Data Documentation, Stakeholder Reporting

WORK EXPERIENCE

Quality Analyst — Fraud & AML Operations · Wipro Ltd (Google Client)

Hyderabad | Jan 2025 – Aug 2026

- KPI Dashboards & Reporting:** Own the end-to-end analytics framework for a 40+ analyst fraud and AML operation — built Power BI and Excel dashboards tracking accuracy rates, error trends, and SLA health; delivered weekly/monthly reports to senior management, improving overall operational accuracy by 14%.
- Root Cause Analysis:** Led systematic root cause investigations into recurring quality failures across fraud investigation workflows — traced errors to upstream data inconsistencies, designed corrective process fixes, and standardized audit criteria that cut repeat error rates by 22%.
- Data Extraction & Trend Analysis:** Extracted and analyzed raw operational datasets from GCP-connected tools to surface performance trends, detect process gaps, and build the data backbone for quality reporting — auditing 200+ monthly high-risk cases.
- Process Improvement via Data:** Identified critical gaps in existing workflows through structured data analysis; drafted 5 SOPs backed by error-rate data and audit findings, translating analytical insights directly into operational change.
- SLA & Compliance Reporting:** Built real-time SLA monitoring reports; maintained 99.2% SLA compliance rate across the team and reported SLA health, breach risk, and resolution trends to leadership on a defined cadence.
- Cross-functional Data Alignment:** Ran regular calibration sessions with team leads to resolve data inconsistencies, align on reporting standards, and ensure accuracy of shared metrics across operations and compliance teams.
- Transaction Data Analysis:** Analyzed large-scale transaction and user behavior datasets to detect suspicious activity, fraud patterns, and financial risk signals — produced actionable insights that fed directly into compliance and platform decisions.
- Dashboard Development:** Built Excel dashboards (Pivot Tables, conditional formatting, trend charts) tracking fraud KPIs, investigation throughput, and risk metrics; replaced ad hoc reporting with a repeatable, structured reporting workflow.
- BIC Process Analytics:** Owned data analysis for the Billing Instrument Change (BIC) process across GCP, YouTube, and Workspace — defined investigation criteria, ensured data consistency across teams, and tracked outcome metrics at scale.

Java Developer Intern · i-ray IT Solution

Hyderabad | Jan 2024 – Jun 2024

- Built Java applications using OOP principles — implemented backend logic, data validation, and error handling with a focus on performance and code quality.

PROJECTS

Enterprise Customer Analytics & Retention Framework — Snowflake · SQL · Python (Pandas, NumPy) · Tableau

- Built an end-to-end data pipeline to ingest, clean, and analyze user engagement and subscription churn logs for an enterprise customer base — handling millions of raw activity records.
- Snowflake Architecture:** Designed and optimized relational staging schemas in Snowflake; wrote complex analytical SQL (window functions, CTEs, multi-level aggregations) to extract cohort-level behavioral signals from raw logs.

- Python Data Cleaning Pipeline: Automated preprocessing using Pandas/NumPy — resolved missing values via targeted imputation (forward-fill for time-series gaps, median imputation for numeric anomalies), detected outliers using IQR filtering, and standardized datetime and string formats for schema-consistent warehouse loading.
- Tableau Dashboard: Built an executive-facing Tableau dashboard visualizing user retention cohorts, feature usage drop-off rates, and system friction points — giving stakeholders instant visibility into churn drivers and engagement patterns.

Business Performance & Compliance Dashboard — *SQL · Power BI · Excel*

- Built a BI solution to track core operational KPIs, SLA compliance, and financial risk anomalies across a multi-team operation.
- ETL & Data Profiling (SQL): Extracted raw transaction data from production databases; wrote SQL scripts using CASE WHEN, COALESCE, and type casting to clean duplicates, handle nulls, and resolve structural data errors before loading.
- Power BI Data Model: Engineered a Star Schema data model in Power BI with advanced DAX measures — calculated real-time SLA compliance rates, error distributions, and rolling trend analyses for leadership review.
- Business Impact: Automated reporting suite replaced hours of weekly manual Excel work — gave leadership a single source of truth for operational quality and removed reporting lag from the compliance decision cycle.

EDUCATION

B.Tech — Electronics & Communication Engineering | Hyderabad | 2019 – 2023 | CGPA: 7.0
